Project Name	Smart Lender
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Defining a problem statement is important because it helps identify user needs and provides a clear direction for developing an effective solution. In the Smart Lender project, the main challenge is that traditional loan approval processes can be slow, error-prone, and difficult to manage with large numbers of applications. Smart Lender uses machine learning to analyze applicant data and predict loan eligibility, enabling faster, more accurate, and consistent lending decisions.

Example:

I am	I'm trying to	But	Because	Which makes me feel
A bank credit officer.	quickly and accurately decide whether to approve a loan application.	manual verification of multiple financial factors takes too much time and is prone to human error.	I have to manually weigh credit history, combined incomes, property area, and dependents.	overwhelmed and inefficient at processing high volumes of loans.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A financial analyst	Evaluate hundreds of loan applications during peak periods..	Manually reviewing each application takes too much	High application volumes increase workload and delay decision-making..	Pressured to maintain both speed and accuracy while ensuring compliance..
