Customer Journey Map

A customer journey map illustrates the steps a user follows while interacting with the Smart Lender system, from applying for a loan to receiving the eligibility prediction. It helps identify user needs, pain points, and opportunities to improve the loan approval process, ensuring a faster, smoother, and more user-friendly experience..

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	• Navigates to the Smart Lender portal. • Reviews the required information • Fills in personal details (Gender, Dependents). • Enters financial metrics (Incomes, Loan Amount).	• Clicks the "Submit Application" button • Waits for the system to evaluate the profile. • The browser sends data to the model.	• Views the final decision on the screen. • Reads their Confidence Score & Risk Band. • Decides whether to proceed with the bank
Touchpoint <i>What part of the service do they interact with?</i>	• The Landing Page (/home). • The Premium Glassmorphism Prediction Form (/predict).	• The "Submit" button. • The Flask Backend API (/submit) • The XGBoost Machine Learning Model.	• The Results Dashboard (Submit HTML page). • The "Risk Band" visual indicator.
Customer Thought <i>What is the customer thinking?</i>	• "Is my income high enough?" • "Do I need a co-applicant to succeed?" • "Are these form fields secure?"	• "Did my form go through?" • "How long will this take to calculate?" • "Will app instantly reject me?"	• "Yes, I got approved!" OR "Why was I rejected?" • "What does 'Moderate Risk' mean for my interest rates?"

Customer Feeling <i>What is the customer feeling?</i>	Hopeful, Anxious, Focused	Anticipation, Nervousness	If Approved: Relieved, Optimistic, Excited If Rejected: Disappointed, Confused
---	---------------------------------	------------------------------	---

Process Ownership <i>Who is in the lead on this?</i>	The Applicant (Interacting with the Frontend UI)	The Flask Backend & ML Pipeline (Processing data)	The Bank Credit Officer (Taking over the final approved application)
Opportunities <i>How can we improve this stage?</i>	• Add helpful "tooltip" icons next to fields to explain what "Credit History 1.0" means. • Add auto-formatting for currency inputs	• Add a dynamic "Analyzing Profile..." loading animation to make the ML evaluation feel more immersive.	• Add an AI explanation feature that tells the user exactly <i>why</i> they were rejected (e.g., "Your Co-applicant income was too low").
