Data Flow Diagram

A Data Flow Diagram (DFD) is a graphical representation that illustrates how data moves through a system, showing the input, processing, storage, and output of information. It helps visualize the interaction between external entities, processes, data stores, and data flows, providing a clear understanding of the system's functionality.

For the Smart Lender – Loan Eligibility Prediction System, the DFD represents the complete flow of loan application data. It shows how the loan applicant or bank credit officer submits applicant details, how the system validates and preprocesses the data, uses the trained XGBoost model to predict loan eligibility, and finally displays the prediction result. The diagram also highlights the data stores, including the loan dataset, scaler, and trained model, which support the prediction process and ensure accurate, data-driven loan approval decisions.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	A person, organization, or system outside the project that sends or receives data (e.g., Customer, Payment Gateway).
Rectangle with numbered header	Process	An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Order).
Rectangle (solid fill, no number)	Data Store	A place where data is held for later use (e.g., Customer Database, Inventory).
Labeled arrow	Data Flow	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
